

## Master's Thesis Preparation

Empowering Users' Privacy Rights in the Internet of Things

#### Nelson Vieira

Last Update: January 31, 2023

- 1 Introduction
- 2 State of the Art
  - Privacy Paradox
  - Differential Privacy
  - Literature Approaches
- 3 Methodology

- Survey
- Application
- 4 Conclusion and Future Work
  - Future Work
  - References
  - Conclusion

Internet of things (IoT) devices are everywhere. These devices create new ways of collecting and process personal data from users and non-users. Most end users are not even aware or have little control over the information that is being collected by these systems.

- Systematic literature review;
- A survey;
- A mobile application.

## Privacy

What is privacy?

 $\mathsf{Privacy} \neq \mathsf{Security}$

Literature Approaches

# **Privacy Assistants**

Figure 6: Internet of Things Portal

Figure 7: Internet of Things Assistant

# Survey

#### 92 Questions

- General knowledge and attitudes towards privacy
- Disposition for sharing personal information
- Privacy concerns
- Current online habits and practices
- Profile identification
- Knowledge and habits regarding the Internet of Things
- Demographic data

## **Application**

Will be composed of the following things:

- Show the geolocation of the IoT devices:
- What type of device it is;
- What type of data is being collect by the device:
- Insert IoT devices and associated information about them.

Methodology

Future Work

#### **Future Work**

Conclusion

#### Conclusion

This project aims to do an exploratory analysis of privacy in IoT systems. It proposes a survey to better understand user's knowledge on this subject and an application that aims to create more users awareness and better inform about their environment, as well as the IoT devices that inhabit it and how they can respond accordingly.
